

ForReview for UNIX

Your Enterprise-Wide
Solutions Provider

GTS-GRAL, Inc.

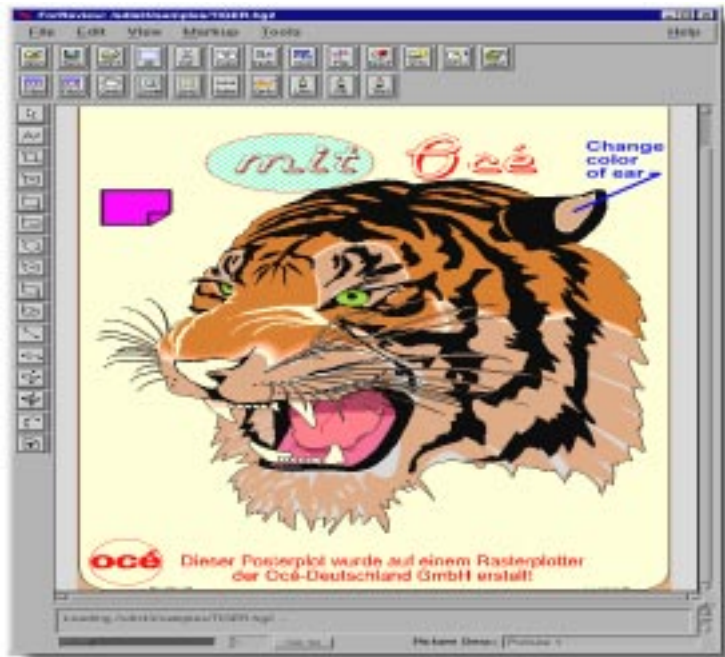

ForReview™ for UNIX by Allegria Software, Inc. provides a simple, efficient way to electronically review and mark-up CAD drawings, technical illustrations and other graphic files on a UNIX platform. **ForReview for UNIX** is an electronic view and mark-up application that operates on UNIX workstations. It allows designers and reviewers to effortlessly view and mark-up drawings and images either locally, or across networks without the need for the original design application.

With **ForReview for UNIX**, a familiar working environment is provided from the moment the program is activated. A versatile set of object drawing tools (including circles, lines, text, arrows, etc.) allow simple click and draw actions. Virtual Post-it® style notes can even be created with the capability of placing them anywhere on a drawing. This dramatically simplifies creating review data, while aiding the designer in locating comments and relating them to the drawing.

ForReview for UNIX's enhanced viewing capabilities give the operator complete control of any image. Scaling a graphic image to any desired size, zooming, rotating, flipping, or creating magnified windows are all built-in functions. When reviewing a complex drawing, or a set of related drawings, the capability of comparing different aspects of the project becomes mandatory. Here again, **ForReview for UNIX** was designed with your needs in mind. For example, viewing multiple drawings simultaneously is provided, insuring maximum accuracy.

More Than Just a Viewer

In addition to its enhanced view and mark-up features, **ForReview for UNIX** also provides several unique and useful options for greater file manipulation.

Product Feature Set

- A montage window facility to juxtapose several drawings, and mark them up as a whole.
- A slide show facility that allows the display of several drawings sequentially under automatic or manual control.
- A printing facility that allows printing of drawings, montages and mark-up information when hardcopy is needed.
- **ForReview for UNIX's** user friendly GUI makes view and mark-up operations simple and intuitive
- Easily performs all necessary view actions such as zoom, pan, rotate, flip and display multiple files
- Creates mark-up objects such as lines, boxes, circles, text and Post-it® style notes
- Builds montages where different images are juxtaposed for comparison
- Creates slide shows that display images sequentially under manual or automatic control
- Prints drawings with or without mark-ups
- Runs under X Windows (UNIX and VMS)
- Supported file formats include: ANSI/ISO and CALS compliant CGM files. Also supported are HPGL and many raster file formats including TIFF and CALS Type 1

Allegria Software, Inc. works closely with industry leaders where **ForReview** is most frequently used: CAD, GIS, CALS, electronic imaging and document management system vendors. Allegria's graphics software products are in use by many major OEMs, government agencies and systems integrators.

Did We Attract Your Attention?

Of course we did! If you need more information about our products, please contact us.
We will solve all of your enterprise-wide requirements - because we can!
